Full Stack Development Documentation

Script-Controlled ACL District Record Access in ServiceNow

Introduction

Project to restrict district record access using ServiceNow ACL scripts.

Project Overview

Provides secure role and district-based access control.

Architecture

Frontend: ServiceNow UI. Backend: ACL scripts and business rules. Database: ServiceNow tables.

Setup Instructions

Configure users, roles, districts and ACL rules.

Folder Structure

ACL Scripts, Business Rules, Tables, Roles, Reports.

Running Application

Access through ServiceNow instance and test ACLs.

API Documentation

Record access, validation and audit operations.

Authentication

Role-based authentication and authorization.

User Interface

ServiceNow forms, lists and dashboards.

Testing

ACL validation, district validation and audit testing.

Known Issues

Role mapping errors may deny access.

Future Enhancements

MFA, AI monitoring, advanced auditing.
